No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 20,

New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus

Example 1; Page 79; 129pp; English.

and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The The Peptides and peptide immunogenic containing them, are used to induce a Thelper cell response.

Containing them, are used to induce a Thelper cell response.

Containing them, are used to induce a Thelper cell response.

Expecifically against Plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, immunocractive self-antigen or tumour antigen. The The peptides and peptide immunogens may be used for prevention and/or treatment of immunocractive self-antigen or tumour antigen. The The peptide immunogens may be used for prevention and/or treatment of hormone (IMRH) for contraception, treatment of a promiscuous of immunocastration); for promoting the growth of a mimals; or for treating allergies or arteriosclerosis incorporation of a promiscuous Thelper cell-mediated immune massles virus F (WF) protein and sequences AAV91121 represents a promiscuous Thelper epitope (Irom the measles virus F (WF) protein and sequences AAV91126 represent synthetic Th epitopes based on the from hepatities and AAV91245 represent synthetic Th epitopes based on the AAV91166 represent synthetic antigenic peptides comprising somatostatin and AAV91201-Y91207 are antigenic peptides comprising somatostatin and AAV91201-Y91207 are antigenic peptides comprising somatostatin and AAV91201-Y91207 are antigenic peptides which may be used to promote growth in livestock. AAX91208 is a human CD4 CDR2 antigenic peptides which may be used to promote growth in livestion of religent peptides which may be used to promot antigent peptides which may be used in the treatment of allergies.

AAY91220 is a peptide derived from foot and mouth disease virus (FMDV)
VPI capsid protein and AAY9121-V91212 comprise this peptide and a Th
epitope. AAY91224-Y91225 comprise the CS antigen and an WNF Th
antigen, and AAY91224-Y91225 comprise the CS antigen and an WNF Th
epitope and may be used in a malaria vaccine. AAY91228-Y91231 represent
CETP-derived peptides and AAY9122-Y91241 are immunogens comprising a
CETP peptide and a Th epitope which may be used to prevent or treat
arteriosclerosis and cardiovascular disease. AAY91277 and AAY9125-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 and AAY91258-Y91273 are antigenic peptides comprising MVH Th and HIV-1 B-cell The invention relates to novel promiscuous T helper cell epitopes (Th).

infection of T cells. AAY90212 is a modified version of a human IgE (immunoglobulin E) CH3 domain, and AAY90213-Y90219 are Th epitope/IgE CH3 antigenic peptides which may be used in the treatment of allergies. AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) VPI capsid protein and AAY9121-Y91222 comprise the peptide and a Th epitope. AAY91223 is a Plasmodlum falciparum circumsporozoite (CS) target antigen. AAY91224 and AAY91225 comprise the CS antigen and an MVFT the epitope and may be used in a malaria vaccine. AAY91228-Y91231 represent CETP-derived peptides and AAY91232-Y91241 are immunogens comprising a arteriosclerosis and cardiovascular disease. AAY91247 and AAY9125-Y91257 are HIV-1 neutralising B-cell epitopes, and AAY91284-Y91251 and AAY91258-Y91273 are antigenic peptides comprising MVH Th and HIV-1 B-cell
                                                                                                                                                                                                                                                             epitope which may be used as a component in an anti-HIV-1 vaccine. Axy1198 and AXY291199 are respectively an immunostimulatery invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Promiscuous T-cell epitope, measles virus F protein; MVF; hepatitis B virus surface antigen; HBV; immunogenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoglobulin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CETP; cholesteryl ester transport protein; anti-arteriosclerotic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis or human immune deficiency virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel promiscuous {\tt T} helper cell epitopes ({\tt T}h), and immunogenic peptides comprising the {\tt T}h epitopes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                               .;

stimulator is linked to a peptide or protein hapten containing B call and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous halper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HIA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten can be omitted from the immune stimulator component. The present sequence represents an LHRH. containing immunogenic peptide as above which can be used as a potent vaccine for treating e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Synthetic immunogenic peptides are provided in which a universal immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          prostatic hyperplasia, androgen-dependent carcinoma, prostatic carcinoma, testicular carcinoma, endometriosis, benign uterine tumours, recurrent functional ovarian cysts, (severe) premenstrual syndrome or oestrogen-dependent breast cancer, or for induction of infertility. ```
The invention relates to novel promiscuous T helper cell epitopes (Th), and immunogenic peptides comprising the Th epitopes of the invention along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport protein (EFFP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone releasing hormone (LHRH) for contraception, treatment of hormone caleasing hormone (LHRH) for contraception, treatment of hormone (LHRH) for contraception, treatment of hormone caleasing allergies or arteriosclerosis. Incorporation of a promiscuous Th (functional in genetically diverse subjects) into an immunogen response, resulting in production of antibodies against a target antigen. Th can replace carrier proteins and pathogen-derived Thelper antigen. Th can replace carrier proteins and pathogen derived Thelper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91197 is the LHRH target antigenic peptide used in these LHRH antigenic peptides. AAY91200 is somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin and a Th epitope. Somatostatin and immunogens may be used to promote growth in livestock. AAY91208 is a human CD4 CDR2-like domain antigenic site, and AAY91209-Y90211 are MVH Th epitope/CD4 CDR2 antigenic peptides which may be used to prevent HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        epitopes. Sequence AAY91121 represents a promiscuous T helper epitope from the measles virus F (MYF) protein and Sequences AAY91122- Y91142, AAY91226 and AAY91246 represents yorthetic Th epitopes based on the MYF Th epitope. Sequence AAY91143 represents a promiscuous Th epitope HAY91155 are synthetic epitopes derived from themseritis B virus (HBY) surface antigen, and sequences AAY91144 *Y91155 are synthetic epitopes derived from this HBV epitope. AAY91156-Y91196, AAY91227 and AAY91242-Y91244 are antigenic peptides.

along with B cell epitopes. The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholestery) ester transport protein (CETP) or HIV epitopes, but more generally against pathogen, immunogens may be used for prevention and/or treatment of infections (HIV, foot-and-mouth disease or malaria); for cancer immunotherapy; for inhibition of the action of luteinising hormone cells for prevention of luteinising hormone cells for contraception, treatment of hormone dependent cancer, prevention of action of luteinising hormone cells for provention of the action of luteinising hormone cells for contraception, treatment of hormone cells for promoting the growth of animals; or for immunocastration); for promoting the growth of animals; or for treating allergies or arteriosclerosis. Incorporation of a promiscous or functional in genetically diverse subjects) into an immunogen improves capacity to induce a strong T helper cell-mediated immune cespons. Sequence AAY91121 represents a promiscous T halper epitope antigen. The can replace carrier proteins and pathogen-derived T helper epitopes. Sequence AAY91141 represents a promiscous T halper epitope contingen. The epitopes based on the AAY91226 and AAY91245 represents a promiscous T hepitope based on the aavance of the patitope. Sequence AAY91141 represents a promiscous T hepitope and patitope and patitope. Trom hepatitis B virus (HBV) surface antigen, and sequences Aay91121 certains and sequences antigen, and sequences antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY91144-Y91155 are synthetic epitopes derived from this HBV epitope. AAY91156-Y91196, AAY91227 and AAY9124-Y91244 are antigenic peptides. Comprising an LHRH sequence joined to a promiscuous Th epitope. AAY91197 is the LHRH target antigenic epetide used in these LHRH antigenic peptides. AAY91200 is somatostatin, and AAY91201-Y91207 are antigenic peptides. Comprising somatostatin and a Th epitope. Somatostatin immunogens may be used to promote growth in livestock. AAY91208 is a human CD4 CDR2-like domain antigenic site, and AAY91209-Y90211 are MVH The peptides comprise to peptides which may be used to prevent HIV infection of T cells. AAY90213 is a modified version of a human IgE antigenic peptides which may be used for prevent HIV infection peptides which may be used in the treatment of a human IgE antigenic peptides which may be used in the treatment of a largines. AAY91220 is a peptide derived from foot and mouth disease virus (FMN) and capital procein and AAY91221-Y91222 comprise this peptide and a Theorem and a Theorem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        epitope. AAY91223 is a plasmodium falciparum circumsporozoite (CS) target antigen, and AAX91224-X91225 comprise the CS antigen and an WWF Th explore and may be used in a malaria vaccine. AAX91228-Y91211 represent CETP-derived peptides and AAY9123-Y91241 are immunogens comprising a CETP peptide and a Th epitope which may be used to prevent or treat arteriosclerosis and cardiovascular disease. AAY91247 and AAY91252-Y91257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 and AAY91258-Y91273 are antiquency emptides comprising MVH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine.

AAY91198 and AAY91199 are respectively an immunostimulatory invasin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
                                                                                   invention relates to novel promiscuous T helper cell epitopes (\text{Th}), immunogenic peptides comprising the Th epitopes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      46.8%; Score 116; DB 21; Length 27;

New peptide immunogen containing luteinising hormone-releasing hormone antigen site and helper T cell epitope, for e.g. contraception and treatment of cancer -

```
ij
                                         The present sequence represents a peptide immunogen comprising a helper T cell (Th) epitope of the F protein of the Measles virus and a target antigen, luteinising hormone-releasing hormone (LHRH).

The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oserrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen and thus for use as (reversible)
                                                                                                                                                                                                                                                                                                                       contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δy
potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HiA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequence from the invasin protein of Yersinia. Components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator component when the hapten is LHRH. Then optionents when the as above which can be used as a potent vaccine for treating e.g. prostatic haptenlasta, androgen-dependent carcinoma, prostatic carcinoma, testicular carcinoma, endometriosis, benign premenstrual syndrome or oestrogen-dependent breast cancer, or for induction of infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1..15

Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HIA phenotypes, and (B) an adjuvant peptide sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain components equence represents an iHRH-containing it invasin domain component peptide as above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgen-dependent carcinoma, testicular carcinoma, endometriosis, bengin uterine tumours, recurrent functional ovarian cysts, (severe) contains and concer, or for miduction of inferting energy of inferting and powarian cysts, (severe)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ï

                                                                                                         ;;
treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic pypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Versinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten
                                                                                                                                                                                                                                                                                                                                                                      1..15 .....measles virus F protein helper T cell epitope"

antibodies against gonadotroph releasing hormone (GRRH also known as luteinising hormone releasing hormone. LIRRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunomimic pubject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic high and specific anti-GRRH attitres. The immunogen is effective in eliciting is a synthetic immunogen of the invention.
                                                                    Gonadotrophin releasing hormone; GDRH; synthetic immunogen;
luteinising hormone releasing hormone; LHRH; contraceptive;
promiscuous helper T-cell peptide epitope; immunomimic peptide epitope;
brasst cancer; uterine cancer; gynaecological cancer; endometriosis;
uterine fibroid; benign prostatic hypertrophy; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a synthetic immunogen for inducing specific

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRI) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunomimic peptide epitope or its analogue. The synthetic animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

LIRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic phypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody firres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                            The invention relates to a synthetic immunogen for inducing specific antibodies against gonadctropin releasing hormone (GnRH also known as luteinising hormone releasing hormone. LIRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The synthetic immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other synthectic phypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

cell fusion glycoprotein precursor - phocine distemper virus (strain Ulster/88)
N;Contains: fusion protein F1; fusion protein F2
C;Species: phocine distemper virus
C;Date: 17-Feb-1994 #sequence_revision 17-Feb-1994 #text_change 25-Oct-1996
C;Accession: A48346
K;Curran, M.D.; Lu, Y.J.; Rima, B.K.
Arch. Virol. 126, 159-169, 1992
A;Ritle: The fusion protein gene of phocine distemper virus: nucleotide and deduced a A;Reference number: A48346; MUID:92398437; PMID:1524494
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cell fusion glycoprotein precursor - phocine distemper virus
N;Contains: fusion protein F1; fusion protein F2
C;Species: phocine distemper virus
C;Date: 30-Sep-1992 #sequence_revision 30-Sep-1992 #text_change 25-Oct-1996
C;Accession: 701368

Cell fussion glycoprotein precursor - rinderpest virus (strain Kabete O)
N;Contains: fusion glycoprotein F1; fusion glycoprotein F2
C;Species: Inderpest virus
C;Species: Inderpest virus
C;Date: 31-Dec-1989 #sequence_revision 31-Dec-1989 #text_change 25-Oct-1996
C;Accession: A31051

Virolagy 166, 149-153, 1988
A;Title: Cloning of the fusion gene of rinderpest virus: comparative sequence analysis w
A;Reference number: A31051; MUID:88322864; PMID:3413983
A;Accession: A31051
A;Residues: 1-546 <HSU>
C;Generic F2
A;Residues: 1-546 <HSU>
C;Generic F3
A;Residues: 1-540 <HSU>
C;Generic F3
A;Gene: F4
C;Superfamily: parainfluenza virus cell fusion protein
C;Keywords: glycoprotein; membrane fusion; transmembrane protein
C;Keywords: glycoprotein; membrane fusion; Tansmembrane predicted <FF1>
F;20-108/Product: cell fusion glycoprotein F1 #status predicted <FF2>
F;109-134/Domain: transmembrane #status predicted <TN2>
F;109-134/Domain: transmembrane #status predicted <TN2>
F;25,57,63,518/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C.Species: rinderpest virus
